wordle new york times today s answer: The God Effect is Real Sujith Ittan, 2025-07-14 Something is really wrong with our reality. It appears that our minds are being manipulated. Synchronicities and the collective unconscious are clues about the mind manipulation mechanism. This mechanism is the God effect, according to the author. The God effect implies that there is an intelligent entity controlling our minds. Who is this intelligent entity manipulating our minds? A God must be responsible for the God effect. How exactly is this God manipulating our minds in this reality that is based on the principles of materialism that we know so well through our sciences? We are unable to account for the God effect within the paradigm of materialism. Are we in a reality based on idealism, where consciousness is fundamental and an intelligent God exists in this context? Or are we living inside a computer simulation? What is the nature of our minds? In order to account for God, we have to question our understanding of our reality, and we have to ask if we are truly in control of our minds, thoughts, and actions. This is a gist of the God, mind, and reality problem that the author tries to discuss in this book. In his first book, the author wondered if a simulation accounts for the God effect. In this book, he wonders if idealism, with consciousness-first principles and an intelligent God, solves the problem.

wordle new york times today s answer: The Big 100 William J. Kole, 2023-10-03 Journalist William J. Kole, reluctant but newly minted member of AARP, explores the looming era of super-aging—incredibly longer lifespans overall, and eight times more centenarians by the year 2050—through the lens of past, present, and future life at ages 50, 65, 80, and on to 100-plus. What happens to all of us when 65 is merely a life half-lived? By 2050, the world's centenarian population—those aged 100 or more—will increase eightfold. Half of today's 5-year-olds can expect to reach the same heights. It's going to upend everything we thought we knew about health care, personal finance, retirement, politics, and more. Whether we're 18 or 81, this tectonic demographic shift will affect us all. The Big 100 confronts readers with both the brightness and potential bleakness of a fate few of us thought possible. Journalist William Kole guides us on this journey into our future, an optimistic but sometimes fraught exploration of super-aging as the grandson of a centenarian. Along the way, there are expert sources, like Dr. Jane Goodall, longevity expert Dr. Thomas Perls, Senator Elizabeth Warren, and even 101-year-old influencer and fashionista Iris Apfel; along with surprises, including the truth about those so-called "Blue Zones" everyone thinks are centenarian factories. (Spoiler alert: They're not.) And there's the troubling truth that those reaching extreme longevity tend to be overwhelmingly white, a product of what experts deem the "weathering theory": the idea that the health of African Americans begins to deteriorate in early adulthood as a physical consequence of socio-economic disadvantages. How long can we live? How long should we live? And what happens when 65 is merely a life half-lived? The Big 100 explores the most pressing questions of our super-aging future, and offers a glimpse of a reality that awaits us, our children, and our grandchildren.

Luken, Suzanne Vaughan, 2023-07-01 This edited volume gathers top scholars from across disciplines, generations, and countries to provide constructive commentary on the theory, methods and practices of institutional ethnography. These contributions explore themes of relevance to institutional ethnographers that are both enduring and newly emerging: how institutional ethnographers can take an expanded view of social institutions, how they might explore the dynamics of ruling relations over time, what results from understanding experience as dialogue (including internal or in-skill dialogue), the significance of “standpoint,” and the opportunities for institutional ethnographers to move beyond texts as they discover and describe social relations.
